Nordset
DISPOSABLE PACKS  FOR OPHTHALMOLOGY

[illegible]

Customized single-use surgical packs for eye surgery

Nordset has provided high quality disposable custom surgical packs for more than 24 years. Nordset has gained an enviable reputation throughout Europe as a trusted and reliable partner for producing and supplying custom surgical packs and accessories.

Numerous hospitals, out-patient centers and practices in Germany and beyond have partnered with Nordset to manufacture and supply customized surgical kits. The customer has full control as to which products shall be included in the pack. All surgical packs are prepared and assembled by our professional staff, under the most rigorous hygiene regulations and in full accordance with the customers' requirements. Our team will work with customers to design the pack in a way that optimizes the operating room workflow.

The surgeon has the option to select from an extensive range of products such as drapes, apertures, incise films, disposable instruments etc.

About Nordset

Nordset GmbH & Co.KG was founded in 2001 as a producer of high quality disposable surgical drapes and custom surgical kits. We have established ourselves as a reliable and valuable partner in the European market.

The non-woven materials used are anti-static and anti-repellent (AS/AR) and therefore guarantee a sterile barrier against infections for both the patient and the surgeon.

For self-monitoring we introduced a rigorous quality management system, which is audited annually. Our surgical kits are your key to a greater safety, efficiency and cost-effectiveness in the OR. We offer custom-made and cost-effective sterile solutions, precisely manufactured and ready for use according to your specifications.

We plan and create your customized packs in full co-operation with our distributors, sales professionals, nursing staff and surgeons, personally in the OR.

**„I have complete
confidence in
these products.“**

NORDSET - Product advantages

Vigilant and diligent production and packaging

Each kit is produced by highly qualified employees under the most rigorous of hygiene standards, in one of our 3 clean rooms.

A hygienic working environment and diligent and highly motivated employees are essential for achieving the highest quality and consistency. Every step in the production process is subject to the strictest controls.

More efficient surgical workflows

The layout of the pack components is designed to ensure an efficient surgical procedure. This optimizes the surgical workflow and assists the work of the OR staff. A smoother work process optimizes the efficiency in theatre, allowing the surgical team to fully focus on surgery.

Consistent Quality

We deliver consistent, reproducible quality by using high grade raw material and adopting precise workflows. This process enables us to produce sterile kits which the end user can count on for every procedure.

The quality and consistency of Nordset products creates confidence and security in your daily surgical practice.

Perfect cost efficiency

Thanks to our custom-made kits, the surgeon only uses products which are needed. Nothing has to be discarded, which is not required, by reducing long-term costs and unnecessary waste.

Optimizing your resources and consideration for the environment is our focus.

Service according to your needs

1

Simple ordering process

When the final pack has been approved, we produce the first batch, which will be sent to you in approximately 4 weeks. Hereafter we produce the projected monthly demand in advance and store it in our specially equipped premises. Therefore we are always ready to deliver.

2

Flexible delivery options

Deliveries can be shipped weekly, monthly or quarterly. In the event of an unexpected rise in demand, we can deliver promptly to avoid shortages. This flexibility gives you the security of always having sufficient material available for your procedures.

3

The advantage of our storage

We handle the entire storage of the kits in our own facility adhering to stringent hygiene regulations. Maintaining the sterility of your kits is our most important goal.

4

Reliable delivery

If needed, we can supply your surgical kits within 24 or 48 hours. Delivery is carried out by our own vehicles or carefully selected forwarding agents.

Five points - our quality promise

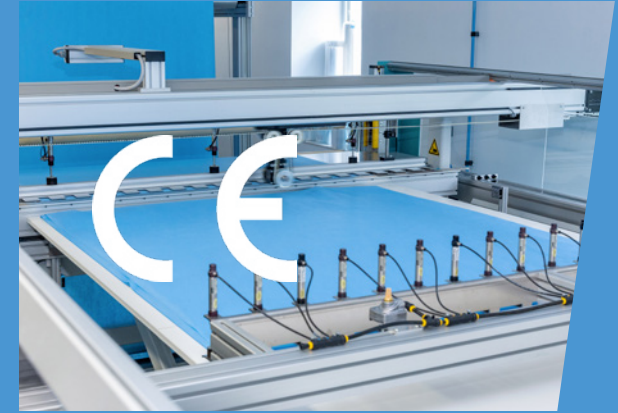

Reliable quality

We guarantee reliable packing of our kits, starting with the manufacturing of the individual drapes, the correct sequence of the ophthalmic products until sealing and finally sterilization. The consistent quality assurance is based on years of experience and continual improvement of our processes. Each and every product is thoroughly checked and inspected prior to integrating it into the kits.

Advanced controls

Medical devices in Germany are already subject to the most stringent controls which we fully conform to. In addition, we voluntarily conduct regular quality tests of all products, facilities and packaging materials to identify microbial contamination and impurities at an early stage.

CE certification

We produce in accordance with the EU MDR Regulation 2017/45 MDR and EN ISO 13485. We are fully compliant and diligent in maintaining the standards and requirements for our products and machinery. We ensure regular validations, calibrations and maintenance. All our products meet and conform with the European quality standards.

SAFE IS SAFE
„QUALITY PAYS OFF“

**„We have been
a reliable partner
for more than
24 years.“**

Verified partners

We demand the same high quality from our suppliers that we implement in our own production processes and audit this accordingly. We guarantee the same high quality from the raw material used within the sterile packs.

Our philosophy: No compromise on quality!

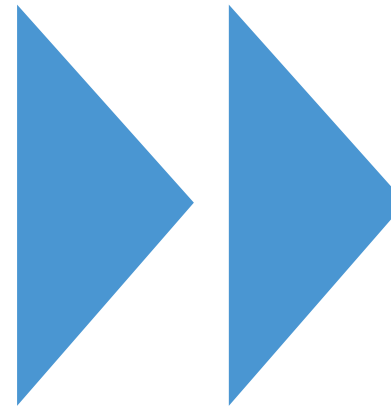

Employee satisfaction

The Nordset team is a happy team. Our employees receive more than fair salaries and additional vacation days. We are committed to maintaining a happy and motivated workforce that is integral to the success of Nordset and recognizes the importance of the products they produce and how they impact real lives. A win-win situation.

The commitment and expertise of our staff is the foundation for the quality of our products and the reliability of our service.
